Drug use among Roma population in Romania

20 years of monitoring and communicating evidence on drugs

EMCDDA, Lisbon 21-22 September 2015

Presented previously in the meeting:

High risk drug use and drug treatment in Europe 2014. Lisbon, 24 September 2014
General characteristics of Roma population in Romania

• Roma community - one of the most significant minorities in Romania – 3.1%;

• Roma – vulnerable group;

• Problems: lack of IDs, low level of education, unemployment, poor health and housing conditions, discrimination and segregation.
Characteristics of Roma population in Romania

- Level of education - extremely low: one-quarter of the population belonging to the Roma minority says it doesn't know how to read and write;

- Level of employment of the Roma population is about 25%;

- Lack of qualifications - the vast majority of Roma has no qualifications: marginalisation on the labour market;

- Housing situation for an important segment of the population of Roma is very serious;

- Roma represents about one-fifth of the total poor population and over a quarter of the total very poor population;
Data from drug related studies
Characteristics of Roma drug users not enrolled in treatment programs

- of the 400 drug users in the sample, 14% were from the Roma ethnic group;
- almost half of Roma drug users have declared a very low level of education - primary studies (45.1%);
- by occupational status - 94.3% of Roma drug users are workers.
Type of drugs used by Roma drug users not enrolled in treatment programs

- Cannabis: 52.5%
- Heroin: 20.5%
- NPS: 13.5%
- Cocaine: 10.5%
- Ecstasy: 7.5%
- Hashis: 2%
- Methadone: 1.8%
- Ketamine: 1.5%
- Volatile solvents: 1.3%
- Total drug users: 50.9%
- Roma drug users: 35.1%
Economic status and educational level of Roma drug users not enrolled in treatment programs

Bar chart showing the comparison between total drug users and Roma drug users.
CONCLUSIONS

• The Roma drug user has the following characteristics: male, very low educational level (primary studies), economically inactive (in particular, no occupation), criminal records;

• The Roma drug user has an increased risk of social exclusion, in comparison with other groups of drug users;

• Social vulnerabilities are provided by their ethnicity and are exacerbated by drug use;
CONCLUSIONS

• The pattern of use for the most Roma drug users is heroin/ NPS by injection;
• Accessibility of the Roma ethnicity to consumer assistance services do not provide limitations for this population segment, the Roma ethnicity is very well represented in relation to its representation in the Romanian population;
• Most of the Roma drug users are attending the services designed to reduce the risk associated with injectable drug use and less the specialized treatment care of dependence.
